

PORTFOLIO

Designed by Nature

The sense under Your feet is as important as the visual impression.

Although the people were always looking for new aesthetic solutions in the interiors, the basic design elements - human comfort and healthy environment – have been unchanged. Natural wood has been traditionally considered as a solution for harmonious space and luxury flooring with its essential characteristics of warmth, longevity and solidity.

Wooden floors fascinates with its organic feeling and sense of nature. It inspires us to design spiritual product with a long lasting value.

Affection to wood gave us possibility to present you this portfolio with unique characters of wood with all its abundances and diversities in colour, shades and pattern, as result of many years of our experience

For every step you make
